

CREATING SIMPLE JAVA FILES USING JCREATOR 4.5

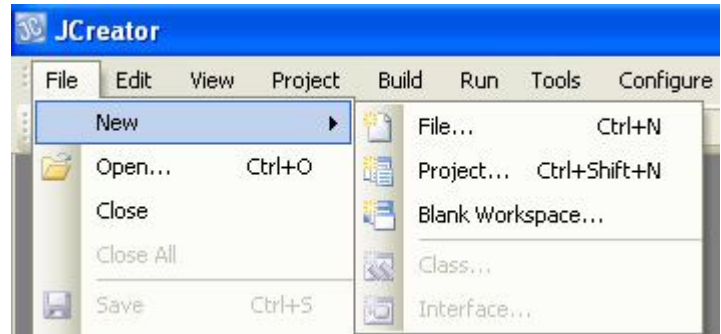

1st -- Double-click on the JCreator 4.5 icon.

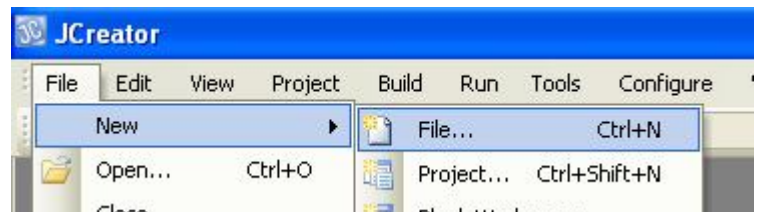

2nd -- Select File from the JCreator 4.5 menu list.

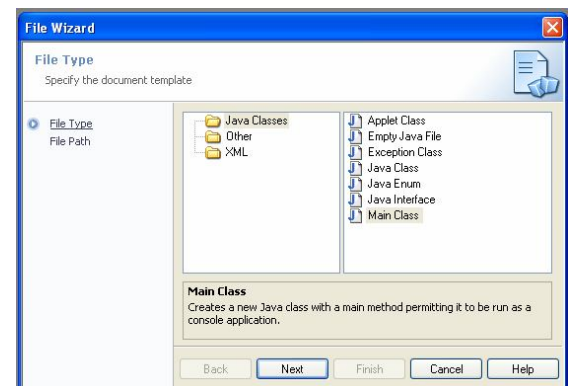

3rd -- Select New from the File menu.

4th -- Select File from the New menu.

5th -- Select the type of file you wish to create. If you want a basic class with no main, select Java Class. If you want a java class that contains a main method, select Main Class. Once you select a file type, click on the next button to make the file.

6th -- The next and final box that pops up asks for a file name and a path. Provide a name and the path where you want the file to be stored.
