## A+ Computer Science Picture Lab Activity 2 Worksheet

Go to the `Picture Lab \ Picture Lab Code \ pixLab \ classes` and run `Picture.java`.

Take a look at the `zeroBlue()` method. After looking at the code and running the java file, what does the `zeroBlue()` method change about the Picture?

Write a new method named `zeroRed()`. Use `zeroBlue()` as an example. Once you have your new method written, add it to the `Picture` class. Once you have it added to the `Picture` class, run the `Picture.java` file to see if your code works.

```
public void zeroRed()  
{
```

```
}
```
